

Abstract of the Invention

The present invention provides a multi-functional rolling apparatus, it basically has a rolling box and possibly combines with other electronic devices like another rolling box or computer connecting ports, card reader units, power extending outlets, 5 WLAN transmitters and networking video cameras to possess multi-function effects. The rolling part has the reel inside the rolling box and has a signal conducting cable on the outer winding, and the box bottom has an elastic buckle for pulling, fixing or retracting signal conductive cable without pushing buttons. The present invented case is capable of having a combinational rod to combine the attractor or magnet as an 10 attracting accessory.
